

MSc -Inorganic Chemistry-2019-20

Odd Sem	MSc 1st Sem	MSc 3rd Sem
July 16-20,2019	Def init ions of group, subgroup, relation between orders of a finite group and its subgroup. Conjugacy relation and classes. Symmetry elements and symmetry operation,	Chemical composition of water bodies - lakes, streams, rivers and wet lands, Hydrological cycle.
July22-27,2019	Def init ions of group, subgroup, relation between orders of a finite group and its subgroup. Conjugacy relation and classes. Symmetry elements and symmetry operation,	Wa ter pollution – inorganic, organic , pesticide, agr icultural, industrial and sewage, detergents , oil spills and oil pollutants.
July 29- Aug 3, 2019	Character of a representation, reducible and irreducible representations,The grea t orthogonality theor em (without proof) and its importance, De rivation ofchara cter tables of C2 v, C3 v and D2 h Cha ra cter tables and their use.	Wa ter quality parameters – dissolved oxygen, biochemical oxygen demand, solids, metals, cont ent of chloride, sulphate, phosphate, nitrate and micro-organisms. Water quality standards.
Aug. 5- 10,2019	Molecula r asymmetry, dissymmetry and optica l activity.	Chemical composition of atmosphere – particles, ions and radicals and their formation, Chemical and photochemical reactions in atmosphere, smog formation
Aug. 12-17,2019	VSEPR Theory, Wa lsh diagrams (tri- a tomic molecules), d p-p p bonds,	oxides of N, C, S and their effect, pollut ion by chemicals, petroleum, minerals, chlorofluorohydrocarbons. Green house effect, acid rain, air pollution controls and their chemistry.
Aug. 19-24,2019	Bent rule and energet ics of hybridiz ation, Hucke l theory with reference to ethylene and butadiene,	Metal Ions in Biological Systems Essential and trac e metals.Na ⁺ /K ⁺ Pump Role of metals ions in biological processes
Aug. 26-31,2019	Some simple substitution rea ctions of covalently bonded molecules of boron, silicon and nitrogen.	Heme proteins and oxygen uptake, structure and function of hemoglobin, myoglobin, hemocyanins and hemerythrin model synthetic complexes of iron and cobalt

Aug. 27- Sep. 1, 2018	Stepwise and overall formation constants and the interaction, trends in stepwise constants, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand,	Structure and function of metalloproteins in electron transport processes - cytochromes and iron-sulphur proteins, synthetic models.
Sep. 2-7, 2019	chelate effect and its thermodynamic origin, determination of binary formation constants by pH-metry and spectrophotometry.	General principles, diffusion ion controlled current, Ilkovic equation, Half-wave potentials, overpotential, theories of hydrogen overvoltage
Sep.9-14,2019	Substitution reactions in octahedral complexes, theories of trans effect with respect to Pt(II) complexes	Tafel's theory / Recombination theory and Volmer, Erdy & Gruss theory / theory of slow discharge of ions
Sep.16-21,2019	brief account of electron transfer reactions, inert and labile complexes.	Symmetry and shapes, and no. of IR modes AB ₂ , AB ₃ , AB ₄ , AB ₅ and AB ₆ (Group Theoretical treatment) mode of bonding of ambidentate ligands and diketonato complexes,
Sep.24-28,2019	Limitation of crystal field theory, crystal field effects,	application of resonance Raman spectroscopy particularly for the study of active sites of metalloproteins
Sep. 30- Oct.5, 2019	John Teller distortion, nephelauxetic series, spin-orbital coupling,	Mössbauer Spectroscopy, Basic principles, spectral parameters and spectrum display. Application of the technique to the studies of bonding and structures of Fe ⁺² and Fe ⁺³ compounds including those of intermediate spin,
Oct. 7-12, 2019	molecular orbital theory of octahedral, tetrahedral and square planar complexes	Sn ⁺² and Sn ⁺⁴ compounds – nature of M-L bond, coordination number, structure and detection of oxidation state
Oct. 14-19, 2019	Doubts Classes	Photoelectron Spectroscopy, Basic principles; photo-electric effect, ionization process, Koopman's theorem.
Oct. 21-23, 2019	Revisions	Photoelectron spectra of simple molecules, ESCA, chemical information from

Even Sem	MSc 2nd Sem
Jan. 1-4,2020	Electronic arrangements of microstates, calculation of the number of microstates in various electronic arrangements, spectroscopic term symbols ,
Jan. 6-11,2020	vector diagrams to indicates coupling of orbital angular momenta in p 2, p 3, d 2 configurations and spin orbit coupling for p2 arrangement,
Jan. 13-18, 2020	spectroscopic terms, spectral terms of d 2 to d8 meta l ions, determining the ground state terms -Hund's rules, derivation of the term symbol for a closed subshell.
Jan. 20-25,2020	Interpretation of electronic spectra, Orgel diagrams,
Jan. 27 -Feb 1,2020	Tanabe-Sugano diagrams for transition metal complexes (d1 -d9 states) ,
Feb 3-8,2020	calculations of Dq, B and b parameters,charge transfer spectra,
Feb.11-16,2019	spectroscopic method of a ssignment of absolute configurationin optically active metal chelates and their stereochemical information,
Feb. 10-15, 2020	anoma lousmagnet ic moments, magnet ic exchange coupling and spin crossover.
Feb.17-22,2020	Circular Dichroism and Optical Rotatory Dispersion
Feb. 24-29,2020	Polarized light, fundamental symmetry requirements, for optical activity, interaction of polarized light with optically active matter,
March 2-7, 2020	optical rotation, Cotton effect,configuration of Tris -chelated complexes.
March 16-21,2020	Metal carbonyls, structure and bonding, vibrational spectra of metal carbonyls for bonding and structural elucidation,
March, 23-28,2020	important reactions of metal carbonyls; prepa ration, bonding, structure and important reactions of transit ion metal nitrosyl,dinitrogen and dioxygen complexes; tertiary phosphine as ligand.
March 30 - April 4,2020	Higher boranes,
April 6-11, 2020	carboranes, meta lloboranes and metallocarboranes.
April, 13-18, 2020	Metalca rbonyl and halide clusters, compounds with meta l-meta l multiple bonds.
April 20-25,2020	Revisions

MSc -Physical Chemistry-2019-20

Odd Sem	MSc 1st Sem	MSc 3rd Sem
July 16-20,2019	Recapitulation of thermodynamic laws. Concept of fugacity, methods for determining the fugacity of a real gas, its variation with temperature and pressure	Electromagnetic radiation, Interaction of electromagnetic radiation with matter- absorption, emission , transmission, reflection, refraction, dispersion, polarization and scattering. Uncertainty relation and natural line width and line broadening
July22-27,2019	Activity, choice of standard states, dependence of activity on temperature and pressure, determination of activity by (i) measurement of vapour pressure, (ii) distribution of solute between two immiscible solvents, (iii) emf measurement and (iv) activity of one component from known value of the activity of the other.	Transition probabilities, results of the time dependent perturbation theory, transition moment, selection rule, intensity of spectral lines, Born-Oppenheimer approximation
July 29- Aug 3, 2019	Partial molar quantities, chemical potential and Gibbs-Duhem equation, variation of chemical potential with temperature and pressure, chemical potential for an ideal gas, chemical potential in ideal gas mixture,	Rotational, vibrational and electronic energy levels, The rotation of molecules, rotational spectra of rigid diatomic molecules
Aug. 5- 10,2019	Determination of partial molar volume, thermodynamic functions of mixing (free energy, entropy, volume and enthalpy), concept of escaping tendency and chemical potential.	Intensities of rotational spectral lines, isotopic effect, non-rigid rotator, spectra of polyatomic linear molecules and symmetric top molecules.
Aug. 12-17,2019	Collision theory of reaction rates, the steric requirement, Arrhenius equation and activated complex theory (ACT), comparison of collision and activation complex theory, Potential energy surfaces (Only basic Idea), thermodynamic formulation of activated complex theory,	The vibrating diatomic molecule, force constant, zero point energy, simple harmonic vibrator, anharmonicity, Morse potential, overtones, hot bands, diatomic vibrating rotators, P,Q,R branches,
Aug. 19-24,2019	Chain reactions (hydrogen-halogen reaction), unimolecular reactions, Lindemann – Hinshelwood mechanism of unimolecular reactions.	Vibration of polyatomic molecules, normal mode of vibrations. Fourier transform spectroscopy. Classical and quantum theories, pure rotational Raman spectra of linear molecules,

Aug. 26-31,2019	Debye-Hückel theory of ion-ion interaction and activity coefficient, applicability and limitations of Debye-Hückel limiting law, its modification for finite-sized ions, effect of ion-solvent interaction on activity coefficient, Physical significance of activity coefficients,	Vibrational Raman spectra, mutual exclusion principle, polarization of the light and Raman effect, depolarization of Raman lines, technique.
Aug. 27- Sep. 1, 2018	Mean activity coefficient of an electrolyte, Debye-Huckel-Onsager (D-H-O) theory of electrolytic conductance , Debye - Falkenhagen effect, Wein effect.	Basic principles of NMR, theory of nuclear magnetic resonance, spin lattice relaxation, spin-spin relaxation, experimental techniques chemical shift,the δ - scale of chemical shift, the origin of shielding constant, pattern of coupling , origin of spin-spin coupling, the nuclear overhauser effect.
Sep. 2-7, 2019	D-H-O equation - its applicability and limitations, Pair-wise association of ions (Bjerrum treatment), Modification of D-H-O theory to account for ion-pair formation.	Basic principles of ESR, experimental technique, the g -value hyperfine structure, applications of ESR spectroscopy to the study of free radicals and fast reactions, spin densities and Mc Connell relationship.
Sep.9-14,2019	Metal/Electrolyte interface, Concept of electrical double layer and its structure: Helmholtz-Perrin , Gouy-Chapman, and Stern models, electrokinetic phenomena, determination of zeta potential.	Basic principles of NQR, experimental techniques, Zeeman effect in NQR spectra, quadrupole interactions in molecules, applications.
Sep.16-21,2019	Gibbs adsorption equation, Langmuir adsorption isotherm and its kinetic derivation for non- dissociative and dissociative adsorption,	Symmetry elements in crystals, criteria for determining unit cell of lattice, stereographic projections, point groups (illustration of R, R-bar, Rm, R/m, R-bar/m point groups only), miller indices for planes
Sep.24-28,2019	BET adsorption isotherm, its kinetic derivation and applications, Study of surfaces by STM, SEM.	Space lattices, space groups P1, Pbar1, P2, P21, Pm, Pc, Cc, C2, Cm, C2 /m. Defects in crystal. Derivation of equilibrium concentration of Schottky and Frenkel defects.
Sep. 30- Oct.5, 2019	Heterogeneous catalysis, surface heterogeneity, surface catalyzed unimolecular and bimolecular reactions,	Production of X-rays, X-ray spectra, absorption edges, X-ray filters, Reciprocal lattice concept and its importance, Definition of Reciprocal lattice vector. Interplanar spacing using reciprocal lattice concept for cubic, tetragonal, orthorhombic and hexagonal crystal systems.

Oct. 7-12, 2019	Temporary and permanent catalytic poisons, activation energy for surface reactions. Comparison of homogeneous and heterogeneous reaction rates.	Equivalence of Bragg's and Laue condition. Structure factor calculations for primitive, base-centered, body-centered and face centered unit cells. Relation of structure factor to electron density and intensities
Oct. 14-19, 2019	Revision	Data collection and data reduction, Phase problem –Patterson method and Heavy-atom method, refinement of structure by successive and difference Fourier synthesis. Correctness of a structure (Discrepancy index).
Oct. 21-23, 2019	Revision, Class Test	Electron diffraction: Basics, Measurement technique, Comparison with X-ray diffraction technique. Applications in structure determination. Neutron diffraction: Basics, measurement techniques, Applications and comparison with X-ray diffraction technique.

Even Sem	MSc 2nd Sem
Jan. 1-4,2020	The postulates of quantum mechanics, Linear and Hermitian operators, Commutation of operators and Uncertainty Principle, Schrodinger equation
Jan. 6-11,2020	Eigen function and eigen values, free particle, Schrodinger equation for a particle in a box, the degeneracy, particle in a box with a finite barrier
Jan. 13-18, 2020	Schrodinger equation for linear harmonic oscillator and its solution, zero point energy, Tunneling Problem: Tunneling through a rectangular barrier.
Jan. 20-25,2020	Energy levels and wave-functions of Rigid rotator, Hydrogen atom: Complete solution (separation of variables in spherical polar coordinates and its solution).
Jan. 27 -Feb 1,2020	Radial distributions, Angular momentum and its directional quantization, Angular momentum operators, commutation relation
Feb 3-8,2020	Revision of Basic concepts, Kinetics of Polymerization: Mechanism and Kinetics of chain growth polymerization: free-radical, cationic, anionic and coordination polymerization.
Feb.11-16,2019	Mechanism and Kinetics of step-growth polymerization. Comparison between step-growth and chain polymerization.
Feb. 10-15, 2020	Molecular mass of polymers: Significance of average molecular mass, Poly-dispersity, Molecular mass distribution curves, Determination of molecular mass by osmometry and viscosity methods.
Feb.17-22,2020	Electrically conducting polymers, Fire resistant polymers, Liquid crystal polymers.
Feb. 24-29,2020	Nuclear stability and binding energy. Mass and binding energy, Nuclear fission and nuclear fusion,
March 2-7, 2020	Fission cross section, chain fission, fission product and fission yield. Interaction of nuclear radiation with matter,
March 16-21,2020	Detectors (Proportional, Geiger-Muller and Scintillation counters) and their principles. Units for measuring radiation absorbed, radiation dosimetry
March, 23-28,2020	Doubt Session
March 30 - April 4,2020	Radiotracer technique, Activation analysis, isotope dilution technique,
April 6-11, 2020	Radiochromatography, radiometric titrations, Neutron absorptiometry, Some applications
April, 13-18, 2020	Revision of Syllabus
April 20-25,2020	Class test
April27-30,2020	Revision

MSc -Organic Chemistry-2019-20

Odd Sem	MSc 1st Sem	MSc 3rd Sem	MSc 3rd Sem	MSc 3rd Sem
2019-2020	Paper -III	Paper - XIV	Paper -XV	Paper -XVI
July 16-20,2019	Types of mechanisms , types of reactions, thermodynamic and kinetic requirements, effect of structure on reactivity - Resonance and field effects,	Various electronic transitions (185 -800 nm), Beer Lambert law, effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds,	Principle , preparations, properties and applications of the reagents of the following metals/non-metals in organic synthesis with mechanistic details Li, Mg, Cd, Zn,	CMolecular orbital symmetry, frontier orbital of ethylene , 1,3-butadiene, 1,3,5 - hexatriene and allyl system classification of pericyclic react ions,
July22-27,2019	steric effect , quantitative treatment. The Hammett equation and linear free energy relationship, substituent and reaction constants.	Fieser-Woodward rules for conjugateddienes and carbonyl compounds, ultraviolet spectra of aromatic and heterocyclic compounds. Steric effect in biphenyls.	Principle , preparations, properties and applications of the reagents of the following metals/non-metals in organic synthes is with mechanistic details, B and I	Woodward - Hoffmann correlation diagram. FMO & PMO approach, Electrocyclic rea ction - conrotatory and disrotatory motions. 4n, 4n+2, allyl systems,
July 29- Aug 3, 2019	Taft equation, kinetic \$ thermodynamic control, Hammond's postulate, Curtin - Hammett principle .	Instrumentation and sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes , aromatic compounds, alcohols, ethers, phenols and amines.	Principle , preparations, properties and applications of the reagents of the following metals in organic synthesis with mechanistic details Pd, Ni, Fe	Ring opening of cyclopropyl halides and tosylates, cycloadditions-antarafacia I and supa rafacial additions,

Aug. 5-10,2019	Potential energy diagrams , transition states and intermediates, methods of determining mechanisms	Detailed study of vibrational frequencies of carbonyl compounds.(ketones,aldehydes,esters , amides , acids, anhydrides, lactones, lactams and conjugated carbonyl compounds) . Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones , combination bands and Fermi resonance.	Principle , preparations, properties and applications of the reagents of the following metals in organic synthesis with mechanistic details Cr and Ti compounds	4n and 4n+2 systems , 2+2 addition of ketenes, 1,3 - dipolar cycloaddition ions and cheletropic Reactions.
Aug. 12-17,2019	Generation, structure ,stability and reactivityofcarbocations,carbanions, carbenes and nitrenes.	FTIR, IR of gaseous,solids and polymeric materials .General introduction and definition, chemical shift,spin-spin interaction,shielding mechanism,mechanismofmeasurement,	Introduction.Different oxidative processes.Hydrocarbons- alkenes, aromatic rings,	Sigmatropic Rearrangements-suprafacial and entarafacial shifts of H, sigma tropic shifts involving carbon moieties,
Aug. 19-24,2019	limiting cases SN1 and SN2, detailed mechanistic description & border line mechanisms, nucleophilicity and solvent effects, competition between nucleophilicity & basicity, ambident nucleophiles,	chemical shift values and correlation for protons bonded to carbon (aliphatic, olefinic, aldehydic and aromatic) and other nuclei(alcohols , phenols, enols , carboxylic acids , amines, amides & mercapto),complexspin-spin interaction between two, three, four and five nuclei (first order spectra),	saturated C-H groups (activated and unactivated) . Alcohols, diols, aldehydes, ketones,	retention and inversion of configuration, [3,3] and [5,5] sigmatropic rearrangements, detailed treatment of Sommelet - Hauser ,
Aug. 26-31,2019	hard and soft nucleophiles and electrophiles, leaving group effects, steric and other substituent effects on substitution and ionization rates, stereochemistry of nucleophilic substitution, S _N i , S _N 1', S _N 2' and S _N i' mechanisms.	spin system-Pople notation, virtual coupling. Stereochemistry, concept of topicity, effect of enantiomeric and diastereomeric protons, hindered rotation, Karplus curve - variation of coupling constant with dihedral angle	ketals and carboxylic acids .Amines, hydrazines, and sulphides .	Claisen and Cope rearrangements introduction to ene reactions. Simple problems on Pericyclic reactions , Group transfers and eliminations.

Aug. 27- Sep. 1, 2018	The E1, E1cB and E2 mechanism, Orientation Effects in Elimination Reactions, Saytzeff and Hoffman rules, Stereochemistry of E2 Elimination Reaction and Eclipsing Effects in E2 Eliminations.	Fourier transform technique, Resonance of other nuclei -F, P. Further tools for simplification (chemical and instrumental) and elucidation of structures by NMR including an overview of 2D NMR Techniques- Deuteriation, changing solvents, trifluoroacetylation,	.Oxidations with ruthenium tetroxide, and thallium (III) nitrate.	Excitation and excited states, Franck-Condon Principle, Jablonski diagram, energy transfer photosensitization, quenching, quantum efficiency and quantum yield.
Sep. 2- 7, 2019	Symmetry elements, D-L, R-S, E-Z and threoerythro nomenclature, interconversion of Fischer, Newman, Sawhorse and flying wedge formulae. conformational analysis,	basic catalysis and acidification, shift reagents, spin decoupling, COSY, DEPT, INEPT, HETCOR, HSQC, HMBC and NOESY.	Introduction. Different reductive processes	Photochemistry of carbonyl compounds (Norrish type I and type II changes, photoreaction of cyclic ketones,
Sep.9- 14,2019	enantiomerism and diastereomerism of simple, cyclic (chair and boat configuration) and acyclic systems. Axial and planar chirality, optical isomerism in allenes,	Introduction, ion product ion - EI, CI, FD and FAB, factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups,	Hydrocarbons – alkanes, alkenes, alkynes and aromatic rings. Carbonyl compounds	Paterno-Buchi reaction and Photoreduction. Photochemistry of olefins and 1,6-Butadiene (cis-trans isomerisation, dimerisation and cycloadditions) . Chemistry of vision.
Sep.16- 21,2019	biphenyls (atropisomerism), spiranes, hemispiranes. elementary ideas about stereochemistry of tertiary amines, quaternary salts, sulphur and phosphorous compounds.	molecular ion peak, metastable peak, Nitrogen rule, molecular weight determination molecular formula from isotopic ratio data,	Carbonyl compounds – aldehydes, ketones,	Di-p-methane rearrangement, enone and dienone rearrangements,
Sep.24- 28,2019	Topicity of ligands and faces, their nomenclature and prostereoisomerism, stereogenicity, chirogenicity	isotope profile of halogen compounds, factors affecting reaction pathways, fragmentation pattern - simple cleavage, retro-Diels Alder,	acids and their derivatives. Epoxides. Nitro, nitroso, azo and oxime groups. Hydrogenolysis, Books	photochemistry of aromatic compounds (substitution, isomerization, cyclization and cycloaddition

Sep. 30- Oct.5, 2019	pseudoasymmetry and prochiral centre. stereospecific and stereoselective reaction.	Hydrogen transfer rearrangement like scrambling, ortho effect, McLafferty rearrangement, fragmentation patterns of hydrocarbons, alcohols, phenols, ethers, aldehydes, ketones, esters,	Principle, preparations, properties and applications of the reagents of the following metals in organic synthesis with mechanistic details Co, Rh, compound	Photo-Fries rearrangement, photolysis of nitrile esters
Oct. 7- 12, 2019	Elementary idea of principle categories of asymmetric synthesis, Cram's rule and its modification, Prelog rule and Horeaus rule	carboxylic acids, amines, nitro, amides, nitriles.	Principle, preparations, properties and applications of the reagents of the following metals/non-metals in organic synthesis with mechanistic details B and I	Barton reaction, Hoffman-Loeffler-Freytag reaction.
Oct. 14- 19, 2019	Stereochemistry of sugars- C1 and 1C conformations of hexoses, c 2'-endo and c3'-endo conformation of pentoses,	General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon),	Introduction. Different oxidative processes. Hydrocarbons- alkenes, aromatic rings,	Application of photochemistry- photosynthesis, phototherapy.
Oct. 21- 23, 2019	homomorphous sugars, abnormal mutarotation and Δ -2 instability factor. Stereochemistry of decalins.	coupling constants. nuclear Overhauser effect NOE Problems pertaining to sections A, B and C.	saturated C-H groups (activated and unactivated). Alcohols, diols, aldehydes, ketones,	Simple problems on Pericyclic reactions, Group transfers and eliminations
	Revisions	Revisions	Revisions	Revisions

Even Sem	MSc 2nd Sem	MSc 4th Sem	MSc 4th Sem	MSc 4th Sem	MSc 4th Sem
2019-2020	Paper(VII)	Paper(XVII)	Paper(XVIII)	Paper(XIX)	Paper (XX)
Jan. 1-4,2020	Theoretical treatment of aromatic substitution reactions, structure-reactivity	An introduction of synthons and synthetic equivalents, general principles of the disconnection approach, functional group interconversions	A detailed study including mechanism or Arndt-Eistert synthesis Beckmann,	Introduction and historical perspective, chemical and biological catalysis, remarkable properties of enzymes like catalytic power,	Classification and discovery of new drugs, history and development of chemotherapeutic agents, therapeutic index, LD50 and ED50, naming of (new) drugs.
Jan. 6-11,2020	relationship in monosubstituted benzene ring, orientation in other ring system, energy profile diagram, Vilsmeier-Haack reaction, Reimer-Tiemann reaction,	the importance of order of events in organic synthesis, one group C-X and two group C-X disconnections	Hofmann, Curtius, Lossen, Schmidt, Favorskii, Neber,	specificity and regulation. Nomenclature and classification, extraction and purification.	Elementary idea about drug action: the receptor role, neurotransmitters and receptors, ion channels and their control, membrane bound enzymes - activation/deactivation,
Jan. 13-18, 2020	Mechanism of Nucleophilic substitution in aromatic systems via diazonium ions, by addition-elimination and elimination-addition mechanism (involving arynes);	the importance of order of events in organic synthesis, one group C-X and two group C-X disconnections	Fritsch-Butenberg-Wiechell, Baeyer-Villiger,	Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors, affinity labeling.	chemical basis of messenger induced change of shape by the receptor, design of agonists, antagonists and partial agonists
Jan. 20-25,2020	Richter rearrangement, Sommelet-Hauser and Stevens rearrangements. General aspects of generation, structure, stability and reactivity of arynes	Reversal of polarity, amine synthesis, Synthesis of alkenes -use of Wittig reagents, use of acetylene and aliphatic nitro compounds in organic synthesis	Benzilbenzilic acid rearrangements.	Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors, affinity labeling.	Drug development: screening of natural products, isolation and purification, structure determination, structure-activity relationships (SAR),
Jan. 27 -Feb 1,2020	Bimolecular mechanisms - SE2 and SEi. The SE1 mechanism, electrophilic	synthesis of three membered rings, photochemistry in	A detailed study including mechanism Darzens synthesis,	Transition-state theory, orientation and steric effect, acid-base	synthetic analogues, isosteres and bioisosteres, concept of lead compounds.

	substitution accompanied by double bond shifts . Effect of substrates	organic synthesis- synthesis of four membered rings ,	stroke enamine synthesis,	catalysis, covalent catalysis , strain or distortion	Brief overview of pharmacokinetics and pharmacodynamics , concept of prodrugs and synergism.
Feb 8,2020	3- Leaving group and the solvent polarity on the reactivity. Neighbouring Group Participation and Carbocation Rearrangements Anchimeric assistance, neighbouring group participation by non-bonding electrons, sigma and p-bonds, classical and non-classical carbocation, carbocations rearrangements, migratory aptitudes, Wagner Meerwein rearrangement	synthesis of three membered rings, photochemistry in organic synthesis- synthesis of four membered rings ,	Shapiro reaction; Sharpless asymmetric epoxidation, Prevost and Woodward hydroxylation	Mechanism of action of chymotrypsin, carboxypeptidase A and papain.	Antineoplastic Agents: Mechlorethamine, Chlorambucil, cyclophosphamide, ca rmustine, aminopterin, 6- mercaptopurine, paclitaxel (synthesis of pa clitaxel excluded)
Feb.11-16,2019	pinacol pinacolone rearrangement, Demjanov rearrangement, Tiffeneau -Demjanov ring expansion, aldehyde -ketone rearrangement, dienone-phenol rearrangement and trans -annular rearrangements.	synthesis of three membered rings, photochemistry in organic synthesis- synthesis of four membered rings ,	Flavonoids Occurrence, nomenclature, general (chemical and spectroscopic) methods of structure determination of flavonoids	Cofactors as derived from vitamins, coenzymes, prosthetic groups, apoenzymes. Structure and biological functions of coenzyme A,	Antimalarials: Chloroquine , primaquine, chloroguanide, pyrimethamine' Analgesics, Antipyrics and Antiinflammatory agents: Morphine and related compounds (codeine and heroin),
Feb. 10-15, 2020	General aspects of generation, structure, stability and reactivity of free radicals, types of free radical reactions	1,3-difunctionalized compounds and unsaturated carbonyl compounds, control in carbonyl condensations,	Isolation and synthesis of Cyanin, Quercetin, Diadzein and Chrysin	thiamine pyrophosphate, pyridoxal phosphate, NAD+, NADP+ , FMN, FAD,	meperidine , methadone, aspirin, acetaminophen, indomethacin, phenylbutazone, mefenamic acid, ibuprofen, diclofenac, naproxen, celecoxib.
Feb.17-22,2020	General aspects of generation, structure, stability and reactivity of free radicals, types of free radical reactions	difunctionalized compounds- Michael addition, and Robinson Annulation.	Biosynthesis of Flavonoids : Acetate pathway and Shikimic acid pathway, biosynthesis of catechin.	Mechanisms of reactions catalyzed by the above cofactors	Antifertility agents: Ovulation inhibitors and related hormonal contraceptives - norethindrone , norethynodrel, estetrol,

					mest ranol, non hormonal contraceptive - centchroman (synthesis of all the drugs excluded).
Feb. 24-29,2020	coupling of alkynes, homolytic aromatic substitution, Sandmeyer reaction and Hunsdiecker reaction.	disconnection approach towards the synthesis of Juvabione and their relative merits and demerits.	Systematic (Hantzsch-Widman) nomenclature for monocyclic and fused ring systems. Methods of synthesis	Prostaglandins : General Introduction, nomenclature and biological roles of prostaglandins. Synthesis of PGE ₂ and PGF ₂ α .	Cardiovascular Drugs: Calcium channel blockers and beta-blockers : sorbitrate, diltiazem, atenolol and verapamil
March 2-7, 2020	Hydration and Addition of Alcohols to Aldehydes , Ketones and Acids . Addition - Elimination Reactions of Ketones and Aldehydes	Basic Principle and need of green chemistry, Different tools for green synthesis (Elementary idea of green reagent , green solvent,	Reactions including mechanism of the following. Five - membered heterocycles:	General aspects of structure determination of terpenoids,	AIDS and drugs against HIV: How HIV infects the system, structure and mode of action of important drugs against HIV (nucleoside reverse transcriptase inhibitors) - AZT, ddI, ddC, d4T and 3TC (synthesis only of AZT).
March 16-21,2020	Reactivity of carbonyl compounds towards Addition. Mannich Reaction, lithium aluminium hydride , reduction of carbonyl compounds	Basic Principle and need of green chemistry, Different tools for green synthesis (Elementary idea of green reagent , green solvent,	pyrazole, imidazole, oxazole, isoxazole, thiazole, isothiazole; their basic character	structure and synthesis of Geraniol, alpha-terpineol,	Cell wall biosynthesis and protein synthesis inhibitors: Penicillins and semi-synthetic penicillins, synthesis,
March, 23-28,2020	acids, esters, nitriles, additions of Grignard reagents. Reformatsky reaction, Wittig reaction, Claisen condensation	synthesis involving basic principle of green chemistry-synthesis of adipic acid and BHC synthesis of Ibuprofen	Methods of synthesis of the following six - membered heterocycles	alpha-pinene, camphor and squalene	structure elucidation and medicinal uses of penicillin G, problems of sensitivity to acids, beta-lactamases and narrow spectrum of activity, solving these problems leading to the development of penicillin V,
March 30 - April 4,2020	Dieckman reaction, Aldol condensation	An idea of supramolecular chemistry	pyrimidines and purines . Aromaticity, Metallocenes and Nonbenzenoid Aromatics Compounds Aromaticity	Biogenetic isoprene rule and biogenesis of terpenoids.	oxacillin, cloxacillin, ampicillin, amoxicillin, carbenicillin and carfecillin. Cephalosporins - Discovery, structure elucidation and synthesis of cephalosporin -C.
April 6-11, 2020	Knoevenagel condensation, Perkin reaction, Cannizzaro reaction,	An idea of supramolecular chemistry	aromatic , non-aromatic, and antiaromatic), aromaticity in charged	Steroids Isolation and nomenclature of	Definition, nomenclature and physiological action, occurrence, isolation, general

	Benzoin condensation, Robinson-Mannich reaction		rings, homoaromaticity, pseudo-aromaticity	steroids,	methods of structure elucidation,
April, 13-18, 2020	Ester hydrolysis, aminolysis of esters, amide hydrolysis	Crown ethers, cryptates,	HMO and PMO for determining aromatic, non-aromatic and anti-aromatic character of annulenes	structure, synthesis (Woodward) and stereochemistry of cholesterol	general methods of structure elucidation, degradation,
April 20-25, 2020	Revision	micelles	having various p-electron systems, application of ¹ H-NMR in determining aromatic character of annulenes.	methods for the following conversions. i) Cholesterol [®] Testosterone ii) Cholesterol [®] Progesterone	classification based on nitrogen heterocyclic ring, role of alkaloids in plants.
April 27-30, 2020	Test	Revision, Test	General considerations, synthesis and reactions of representative compounds Ferrocene, Azulene, Tropone and Tropolones.	iii) Cholesterol [®] 5-a and 5-b cholanic acids. iv) Johnson's hydrochrysen approach towards the synthesis of, Androsterone.	Structure, stereochemistry, synthesis and biosynthesis of the following: Ephedrine, (+)-Coniine, Nicotine, Quinine and Reserpine. Books Suggested

MSc

Odd Sem	MSc 1st Sem Mathematics	MSc 1st Sem Life Sciences
July 16-20, 2019	Examples of scalar and vectors, definitions of vectors in two, three spaces, representation and simple properties of vectors, addition and subtraction of vectors, vector addition by the method of triangles,	Structure of prokaryotic and eukaryotic cells, intracellular organelles and their functions, comparison of plant and animal cells.
July 22-27, 2019	Resolution of vectors into rectangular components, addition of vectors by components,	Overview of metabolic processes - catabolism and anabolism. ATP - the biological energy currency. Carbohydrate metabolism - glycolysis,
July 29- Aug 3, 2019	multiplication and differentiation of vectors. Scalar product of vectors, vector product, concept of normalization, orthogonality and complete set of unit vectors.	Krebs' cycle, glycogenolysis, glycogenesis, pentose phosphate

Aug. 5- 10,2019	Illustration of applications to spectroscopy and quantum chemistry.	pathway and gluconeogenesis ,
Aug. 12-17,2019	Definition of matrix, types of matrices, viz . row matrix, column matrix, null matrix, square matrix, diagonal matrix, addition, subtraction and multiplication by a number, matrix multiplication.	Structure and functions of important derivatives of monosaccharides like
Aug. 19-24,2019	Transpose and adjoint of matrix, elementary transformation, representation and applications (without development of theory) to solution of linear equations. Definition of determinant,	glycosides , deoxy sugars, myoinositol
Aug. 26-31,2019	properties of determinants, evaluation of determinants. Illustration or applications to group theory, problems in chemistry.	amino sugars-N-acetylmuramic acid and sialic acid, disaccharides Structure and biological functions of structural polysaccharides - cellulose and
Aug. 27- Sep. 1, 2018	Need for logarithm in chemistry. Theory and application of logarithms for solving general and chemical problems.	chitin. Storage polysaccharides - starch and glycogen. Heteropolysaccharides-glucosaminoglycans
Sep. 2-7, 2019	Rectangular coordinates, straight lines, slope and intercept of the equation, slope and point equation, two point equation,	mucopolysaccharides .Glycoconjugates- glycoproteins and glycolipids.
Sep.9-14,2019	parallel lines , points of intersection, distance between two points, change of origin. Examples from problems in chemistry, curve fitting for least squares method.	Role of sugars in biological recognition. Blood group substances.
Sep.16-21,2019	The binomial expansion, some example from chemistry, sines, cosines and tangents, trigonometric identities, polar coordinates in trigonometric functions	Fatty acids , essential fatty acids, structure and function of triacylglycerols, glycerophospholipids, sphingolipids, cholesterol,

Sep.24-28,2019	Theory, rules of differentiation, powers, added and subtracted functions, constants, products, quotients, functions of a function, logarithmic differentiation, and parametric functions. Algebraic simplification, differentiation of implicit functions, graphical significance of differentiation,	Bile acids, prostaglandins. Lipoproteins - composition and function, role in atherosclerosis.
Sep. 30- Oct.5, 2019	rate of change of slope, successive differentiation. Examples related to maximally populated rotational energy levels, Bohr's radius and most probable velocity from Maxwell's distribution. Exact and inexact differential with their application to thermodynamic principles.	Properties of lipid aggregates-micelles, bilayers, liposomes and their possible biological functions. Biological membranes. Fluid mosaic model of membrane structure.
Oct. 7-12, 2019	The fundamental theorem, geometrical significance of partial differentiation, special cases of fundamental theorem, successive partial differentiation. Integral transforms (Fourier and Laplace). Reduction formulae, application to chemical problems. Methods of Lagrangian multipliers, Sterling's approximation, probability and errors.	Essential amino acids, Isoelectric pH, chemical and enzymatic hydrolysis of proteins to peptides, amino acid sequencing. Secondary structure of proteins, forces responsible for holding of secondary structures. α -helix, β -sheets, supersecondary structure, triple helix structure of collagen.
Oct. 14-19, 2019	Integral theory, rules of integration between limits, significance of 'e' exponential equations, methods of integration, viz. algebraic simplifications, substitution, integration by parts, integration by partial fractions, coordinate transformation (e.g., Cartesian to spherical polar), curve sketching, integral as area. Illustration of application in chemistry. Evaluation of standard integrals used in chemistry.	Tertiary structure of protein- folding and domain structure. Quaternary structure. denaturation of proteins Nucleic Acids and Genetic Code Structure of nucleotides, nucleosides, DNA (Watson-Crick model) RNA structure and conformation,
Oct. 21-23, 2019	Simple differential equations, separable variables, homogeneous equations, exact equations, linear equations, equation of the first and second order, partial differential equation, application to physico-chemical problems.	Replication of DNA (semi-conservative, conservative and dispersive replication Meselson-Stahl experiment), transcription, translation of genetic material, genetic code, universality of the code, codon, anticodon pairing, RNA, protein biosynthesis (initiation elongation, termination and processing of the peptide chain).

MSc

Even Sem	MSc 2nd Sem Computer
Jan. 1-4,2020	Elementary Aspects of computer , memory size/architecture.Binary, octal & hexadecimal number systems. Using Internet, word processing package; Graphics Package and visualization.
Jan. 6-11,2020	Introduction to Operating system (UNIX, Windows) and programming language. Algorithm, Flow charts. Writing simple programs, converting a flow chart into a program.
Jan. 13-18, 2020	Using graphics package plotting (a) $y = x, x^2, \sin(x), \tan(x)$ (b) wavefunctions for s, p, and d – orbitals.
Jan. 20-25,2020	Numerical Methods: Roots of Polynomials, Solution of Linear simultaneous equations, matrix multiplication and inversion.
Jan. 27 -Feb 1,2020	Numerical differentiation and integration. Statistical treatment of data , variance and correlations, linear regression
Feb 3-8,2020	Using ChemDraw. Writing programs for van der Waals equation, pH titration, kinetics, radioactive decay,
Feb.11-16,2019	evaluation of lattice energy and ionic radii from experimental data.
Feb. 10-15, 2020	Elementary structural features such as bond lengths,
Feb.17-22,2020	Elementary structural features such as bond lengths, bond angles, dihedral angles etc.
Feb. 24-29,2020	of molecules extracted from a database such as Cambridge database. numerical problem on data base
March 2-7, 2020	numerical problem on data base
March 16-21,2020	chem draw molecular representation on computer
March, 23-28,2020	polynomials programme determination on computer
March 30 - April 4,2020	Doubt session
April 6-11, 2020	Revisions
April, 13-18, 2020	Revisions
April 20-25,2020	class tests
April 27-30,2020
